EDUCATION

Cornell University / Cornell Tech

Master of Engineering in Computer Science

Aug 2026 - May 2027

McGill University

BS in Statistics, Computer Science; GPA: 3.72/4.0

Jan 2023 - Aug 2026

EXPERIENCE

Michelin

Dec 2025 – April 2026

Student Consultant, Machine Learning — McGill University

- Analyzed 3.5M+ forklift tire observations across 82 variables to predict end-of-life replacement timing, reducing mean absolute error by 15% compared with an age-based replacement baseline.
- Built and evaluated an XGBoost model and used SHAP feature importance to support prioritization of high-risk tires for inspection and replacement.

International Air Transport Association (IATA)

Sep 2025 – Dec 2025

Student Consultant, Data Science — McGill University

- Analyzed 100K+ flight trajectories to investigate air-traffic safety patterns under sparse TCAS event labels.
- Built ETL data pipelines and deployed dashboards providing real-time analytics with <2s latency.

McGill University

May 2025 – Aug 2025

Research Assistant (Prof. Prémont-Schwarz, Reinforcement Learning)

- Collaborated with Raymond Chua (PhD) on follow-up work to his NeurIPS 2024 paper Learning Successor Features the Simple Way.
- Developed a configurable AI agent with TD(λ) eligibility traces, improving model performance.

Deloitte

May 2024 – Aug 2024

Software Developer Intern

- Automated tender searches across 20+ sources, reducing processing time from 3 hours to seconds.
- Deployed a Dockerized tender aggregator on AWS EC2, using Lambda to schedule daily runs and S3 to archive historical data.

IOMETE (YC Winter 2022)

May 2023 – Aug 2023

Software Developer Intern

- Integrated MongoDB and LangChain for semantic retrieval, improving complex-query handling from 40% to 80%.
- Integrated LLM outputs with the backend for query execution, error handling, and conversational follow-up workflows.

PROJECTS

Immune Harness | Python, FastAPI, MongoDB Atlas | [Link]

Sep 2026

- Architected a self-improving AI-agent security harness that blocks policy violations, stopping repeat threats 2.6× faster in testing.
- Led development across 4 engineers, defined shared coding-agent workflows and merged 8 pull requests in 8 hours.
- Built a FastAPI gateway combining policy checks with Jev risk scoring, correctly classifying 30/30 live test cases.

49 Agents IDE | Node.js, WebSockets, tmux | [Link]

2026

- Designed core features and led Hacker News/Product Hunt launches, growing the project to 600+ GitHub stars.
- Developed a terminal security patch using localhost binding and per-process authentication, blocking all 4 tested attack paths.

TECHNICAL SKILLS

Programming Languages: Python, SQL, R, JavaScript, TypeScript, C, C++, Bash

Frameworks & Libraries: PyTorch, FastAPI, LangChain, Node.js

Tools & Technologies: Git, Docker, Kafka, REST, CI/CD, AWS (EC2, S3, Lambda), MongoDB, PostgreSQL

Languages: English, French, Azerbaijani, Turkish, Russian
